

## The status of syllables within the prosodic hierarchy in Korean

Seunghun J. Lee (ICU) seunghunjee@gmail.com  
Hyun Kyung Hwang (NINJAL) hwang@ninjal.ac.jp

[ 2 ]

## Themes of the workshop

- (i) is the set of prosodic levels universal?
- (ii) what's the limitation on cross-linguistic variations of syllable shapes across languages?
- (iii) how do prosodic structures affect segmental phonological patterns and phonetic implementation patterns?
- (iv) what are possible segmental effects on prosodification?
- (v) how do speakers actually express prosodic structures in their speech?
  
- This talk aims to address (i), (iv) and (v)

## Prosodic levels in Korean

- Korean phonology shows evidence for various prosodic levels
  - Phonological phrases
  - Prosodic words
  - (Feet)
  - Syllables

[ 3 ]

## The status of foot in Korean

- Jun (1994)
  - ... based on discussion in Lee (1974) and Lee (1987), I assume that Korean metrical feet are (i) right-headed, (ii) unbounded and (iii) quantity-sensitive.
  - Therefore, no matter how many light syllables precede a heavy syllable, they form a single foot with the heavy syllable. (See Jun 1993 for a fully detailed discussion of these two arguments.)

[ 4 ]

## Korean truncation

- <http://krdic.naver.com/>
- The dictionary has a section for words used in chat rooms.
- Many of the words in this section have truncated forms.
- Anyone can add a new entry to this open dictionary.

채팅어	카테고리	분야	작성일	승인	삭제
아햏햏	채팅어	ludgp129	172	16.01.13.	
워드라집	채팅어	whopar2	19	15.12.30.	
트리플집	채팅어	whopar2	12	15.12.30.	
더블집	채팅어	whopar2	13	15.12.27.	
파스트 블러드	채팅어	whopar2	13	15.12.27.	
장수	채팅어	ardw1	21	15.07.05.	

## Some examples (from the naver open dictionary)

- pul<sup>h</sup>anin kimjoil → pulkim (불타는 금요일 → 불금)
- hankukinheŋ → hanin (한국은행 → 한은)
- kaŋlɔk<sup>h</sup>uc<sup>h</sup>ʌn → kaŋc<sup>h</sup>u (강력추천 → 강추)
- alipait<sup>h</sup>i → alpa (아르바이트 → 알바)
- keinsocag → kenso (개인소장 → 겐소)

## Pilot

- Experimental items (n=38) were run as a pilot with 4 participants
  - The participants were asked to suggest all possible truncated forms from a provided form.
    - 타르타버거 [tʰalitʰapɔkɔ] ‘Burger with tartar sauce’  
→ [tʰapɔ], [tʰalpɔ], [tʰapɔk]
  - They were also asked to judge their preference toward an expected form created by the experimenters.
    - 타르타버거 [tʰalitʰapɔkɔ] → [tʰapɔ]
- Results show a strong preference toward a truncation pattern that involves initial syllables of morphemes
- Participants often dispreferred non-initial truncation patterns citing the difficulty/impossibility of recoverability (to its original form).

## Pilot stage: results

- Experimental forms with multiple patterns were selected for a further study.
  - There was no clear-cut patterns between linguistically trained participants and non-linguists.
  - All four participants were not active users of any online games.

## Main experiment

- Using Google Forms
  - Available at: <https://goo.gl/SnONMK>
- Recruiting of participants:
  - Email
  - Facebook
- Experiment
  - 20 items (6 items were control)
  - each item had 3 varied truncation forms
  - instructions and forms were displayed in Hangeul (the Korean script)
  - participants were asked to judge the well-formedness of the truncated forms in a scale of 0 (very bad) to 6 (very good)

9

## Main experiment: demographics

- Participants: 62 speakers of Korean
- Gender: male (29) female (33)
- Age: average 36.4 (s.d. = 11.2)
- Game users: yes (15); no (47)
- Dialect
  - Seoul Metropolitan (32)
  - Jeolla (18), Gyeongsang (6), Chungcheon (3)
  - Jeju (1) Gangwon (2)

10

## Main experiment: data

- A control form [hankukinheŋ] → [hanin] was used to group the participants
  - This form is used as a control because the truncated form is widely used in spoken and written Korean
- Group 1: Participants who assigned 5 or 6 (n=27)
- Group 2: Participants who assigned 1-4 (n=27)
- Group 3: Participants who assigned 0 (n=8)

11

## Results: pair 1

		CVCV	CVCCV	CVCVCVC
son	keinsamulham	kesa	kensa	kesaham
obs	kuipsamulham	kusa	kupsa	kusaham

12

## Results: pair 2

		CVCV	CVCCV	CVC2CV
son	peiltehakkyo	pete	pe <del>l</del> te	ilte
obs	kaiptehakkyo	kate	ka <del>p</del> te	ipte

13

## Results: pair 3

		CVCVC	CVCCVC	CVCCV
son	ρλλcαηcʰi	ρλcαη	ρλ <del>c</del> αη	ρλncʰi
obs	mapukληcʰi	makλη	ma <del>p</del> kλη	mapcʰi

14

## Results: pair 4

		CVCV	CVCCVC	CVCVC
son	tʰalitʰapλkλ	tʰapλ	tʰal <del>p</del> λ	tʰapλk
obs	kʰapikʰapλkλ	kʰapλ	kʰa <del>p</del> pλ	kʰapλk

15

## Results: pair 5

		CVCV(C)	CVCCVC(C)	CVCVCV
son	melitaitʰi	meta	me <del>l</del> ta	melita
obs	kaponaitʰi	kapon	ka <del>p</del> pon	kapona

16

## Discussion

### - truncation strategy

- Morpheme initial-syllable
  - **han**kukinheŋ → hanin (한국은행 → 한은)
  - **kaŋ**ljakcʰuʰan → kaŋcʰu (강력추천 → 강추)

17

## Discussion

### - segmental effects on prosodification

- sonorant coda
  - word-medial syllables can be truncated with a sonorant coda
    - kensa, pelte, pʌncan, tʰalpʌ, melta
  - obstruent codas are not a preferred strategy
    - kupsa, kapte, mapkaŋ, kʰappa, kappon
- Truncation of particles
  - na-nin → nan (나는 → 난) 'I-Topic'
  - na-lil → nal (너를 → 널) 'you-Acc'
  - nuku-lil → nuku-l (누구를 → 누굴) 'who-Acc'
  - muat → mwa/mʌ (무엇 → 뭐/머) 'what' (\*mwat)
  - muat-il → mwʌl (무엇을 → 뭘) 'what-Acc'

18

## Discussion

### - segmental effects on prosodification

- obstruent coda
  - word-final syllable can be truncated with an obstruent coda
    - tʰapʌk > tʰapʌ, tʰalpʌ
    - kʰapʌk > kʰapʌ, kʰappa
  - word-initial syllable can be truncated with an obstruent coda
    - cʰek ilknin mokjoil → cʰekmok
    - cʰʌspʌcʰe kʰomenti → cʰʌskʰo
    - noksekʰaŋtʰoŋ → nokkʰaŋ

19

## Discussion

### - universality of prosodic level

- In partial reduplication (Jun 1994), right-headed unbounded feet were seen as a preferred foot structure
- The truncation pattern reported here shows that there is a different foot structure preferred.
  - CVCCV vs. CVCVCVC

## Experimental items

- 개인사물함 (개사, 갠사, 개사함)
- 구급사물함 (구사, 급사, 구사함)
- 배일대학교 (배대, 벨대, 일대)
- 가입대학교 (가대, 갑대, 입대)
- 타르타버거 (타버, 탈벅, 타벅)
- 카프카버거 (카버, 카벅, 칼벅)
- 버너장치 (버장, 번장, 번치)
- 마부경치 (마경, 맘경, 맵치)
- 메르다이트 (메다, 멜다, 메르다)
- 카보나이트 (카본, 캅본, 카보나)

(The following items are excluded from the current analysis)

- 나무다리건설 (나다건, 나다건설, 나건)
- 고기야채김밥 (고야김, 고야밥, 고야김밥)
- 술 먹는 공휴일 (술공, 술휴, 술먹공)
- 책 읽는 목요일 (책목, 책일, 책목일)
